COMPARE**

> RUN SHORTS WOMEN 4.0

> MATCH THE PRODUCT! CAN IT COMPETE WITH X-BIONIC®?

1 AKTIV-BUND
Keeps the shirt from slipping up or constricting.

2 3D BIONIC SPHERE® SYSTEM WITH THERMOSYPHON® TECHNOLOGY
Optimized through testing and empirical experience, the 3D Bionic Sphere® system with ThermoSyphon® technology stops unpleasant moisture and counteracts the danger of overheating or overcooling during rest and recovery phases. The cooling function begins as soon as your body heats up and starts to sweat.
3D Bionic Sphere® System is Patented in 29 countries: AT, BE, BG, CH, CY, CZ, DE, DK, EE, ES, FI, FR, GB, GR, HU, IE, IT, LU, MC, NL, PT, SE, SI, SK, TR, AU, CA, CN, JP

3 ISO-PAD
Targeted insulation of individual body parts against ambient coldness can prevent the body from getting cold. This is why ISO-Pads over the hipbones retain body heat that is necessary to guarantee interior organ functionality.

4 X-BIONIC® PARTIALKOMPRESSION®
A new benchmark in compression technology. X-BIONIC® Partialkompression® utilizes the advantages of compression without neglecting cooling.
Patented in 8 countries: AU, CA, JP, KR, MX, NZ, RU, ZA

5 NEURAL-RESPONSE-EFFECT
X-BIONIC® Partialkompression® puts peripheral nerve cells in a constant state of readiness; optimises the exchange of neural impulses between muscles and brain; increases muscle reactions, contractions and coordination; and decreases the risk of injury and exhaustion.

6 COHESION WRAP®
Technology Vicarious-Connective-Tissue offers connective tissue support and hold. It gives female connective tissue from the exterior what it lacks: stability. Its compression and the special zonal structure ensures less lactic acid can penetrate tissues. This further supports lymphatic flow and can reduce dimpling.

7 AKTIV-BUND
Keeps the shirt from slipping up or constricting.

8 IDEO-WAISTBAND
Ideally designed, ergonomically optimised. The ergonomically optimised waistband with higher cut in the back keeps the garment in place even during constant movements

9 SMART PHONE POCKET
Pocket for e.g. an iPhone.

10 HEAT-TRANSFER-ZONE
The extremely fine mesh between the compression ridges allows heat to be optimally dissipated.

11 INTERCOOLER
This 3D construction collects perspiration on the upper thigh and maintains it directly upon the skin so it can evaporate optimally while directly on this important muscle group. In between periods of exertion, the Intercooler's rib technology lies in a wavelike structure on the muscle to provide insulation. The locked-in air protects these vulnerable muscles from over-cooling.

1 ERGONOMICALLY OPTIMIZED?

2 THERMOREGULATING? PATENTED?

3 ISOLATION?

4 PARTIAL COMPRESSION? PATENTED?

5 SMART PHONE POCKET?
